Application for Backend Engineer Position

Dear HR teams,

My name is Cao Ngoc Tau. I am a Backend Engineer with a strong foundation in web development and a growing focus on system reliability, performance optimization, and production-ready API design.

I graduated from Passerelles Numériques Vietnam (PNV), where I built a solid technical background through hands-on projects in web development, databases, object-oriented programming, and system design. Since then, I have continued to deepen my skills through real-world projects using Laravel, React.js, and TypeScript, with particular attention to API design, transactions, caching, and performance considerations.

Through my recent projects, I have designed and implemented RESTful APIs, analyzed customer requirements, and translated them into maintainable system features. I have worked with database transactions, optimized queries for data consistency, and adopted a deployment-aware mindset to reduce risks in production environments. Beyond technical skills, I value clear communication, structured problem-solving, and collaboration across teams.

I am highly motivated to learn, take ownership of my work, and continuously improve as an engineer. I believe my combination of technical depth, analytical thinking, and communication skills would allow me to contribute effectively to your team while continuing to grow professionally. Please find my CV attached for more details about my background and projects.

More information concerning my education and experience is in the enclosed CV, and I would appreciate an interview opportunity with you at your earliest convenience. Should you inquire about any additional information about my application, contact me at (+84) 9 61 61 5935. I look forward to seeing you and will make the most of every opportunity you give me.

Thank you very much for your time and consideration.

Yours sincerely,

Tau

Cao Ngoc Tau
